

PITCHER SAMPLER

The Pitcher Sampler is designed specifically to recover accurate samples from formations that are too hard for thin-wall shelby samplers or too brittle, soft or water-sensitive to permit satisfactory recovery by conventional core barrel type samplers.

- Spring-seated tube telescopes into cutter barrel as formation hardness increased.
- Sample all materials- including soft rock, friable shales and problem clays.
- 6 ¼" ID H.S.A.
- 36" Long Shelby Tube
- Depending on depth takes ~45 minutes per sample
